

DESCRIPTION

Sandcastles come in all shapes and sizes...that's why they're so much fun to build! So grab some water, a butter knife and of course some sand and learn how to create your very own Fish.

MATERIALS

- two 5 gallon buckets (one bottomless)
- shovel
- spatula
- knife
- spoon
- water
- sand

DIRECTIONS

1. Pour sand into your bottomless bucket. Fill it to the top with sand while slowly adding water, and pack it down. Use a spatula to tap around the edges of the bucket before sliding the bucket off.
2. Draw a basic fish shape on the side and cut out the top area. Angle out the bottom part underneath the fish.
3. Draw a "V" shape at the end for a tail. Carve out a fin on the top of the fish's body. Try to make it round.
4. Make a tail, a circle for an eyeball and draw a jaw. Carve a little triangle at the jawline for a fin. Use your spoon to create scales.
